

# HUME

HUME (Birch et al., 2016) improves over HMEANT by:

- using semantic trees (UCCA, Abend and Rappoport (2013)),
- using *source rather than reference*,
- using trees on the *source only*, not malformed hypothesis.

Two manual stages again:

1. Create UCCA tree for the source (can reuse for more systems!).
2. Label UCCA tree indicating how much was preserved by MT.
