

Examining Continuous Space

Proposed strategy:

1. Propose directions of exploration.
2. Generate seed pairs of sentences for each of the directions.
3. Collect specimens along the proposed directions:
 - interpolation, a “sentence in between”,
 - extrapolation, “a sentence further in the hinted direction”.
 - Allow people to say “impossible”.
4. Validate the relations.
5. Create the partially ordered set.
6. Search for a manifold covering the ordered set.

Some first ideas explored with Chris Callison-Burch.

First dataset for Czech released (Barančíková and Bojar, 2020).
