Brute-Force MT

Translate only sentences listed in a "translation memory" (TM):

$$
\begin{array}{rcl}
\text{Good morning.} & = & \text{Dobré ráno.} \\
\text{How are you?} & = & \text{Jak se máš?} \\
\text{How are you?} & = & \text{Jak se máte?}
\end{array}
$$

$$
p(e_1^I|f_1^J) = \left\{ \begin{array}{ll} 1 & \text{if } e_1^I = f_1^J \text{ seen in the TM} \\ 0 & \text{otherwise} \end{array} \right. \tag{2}
$$

Any problems with the definition?
