Predicting Target Syntax

My students Dan Kondratyuk and Ronald Cardenas retried Nadejde et al. (2017) with:

- sequence-to-sequence model,
- Transformer model.

Predicting target syntax using:

- a secondary decoder
- interleaving.

As tags, they used:

- correct CCG tags, • random tags, • a single dummy tag.

(Kondratyuk et al. Replacing Linguists with Dummies. PBML 2019.)
